

SPUNTA

BEA x USDA 96 56

- Fresh market and home frying
- Big sized, elongated tubers
- High yield potential in warm climates

VARIETY DESCRIPTION

Characteristics

Skin colour	Yellow
Flesh colour	Light Yellow
Fries quality	Average / 2.5
Tuber shape	Long Oval
Tubers per plant	9 - 11
Maturity	Early Maincrop
Dormancy	Average
Berries	Few
Cooking type	B
Average tuber length	109
Washability	Good
Underwater weight	355 - 375
Dry matter %	19 - 21 %

Sensitivity

Bruising	Quite sensitive
Mechanical damage	Quite sensitive
Growth cracks	Slightly sensitive
Secondary growth	Quite sensitive
Sencor (Metribuzin)	Slightly sensitive
Drought	Not sensitive
Hollow hearts	Slightly sensitive

Resistances

Y virus	Susceptible
Yntn virus	Slightly susceptible
Spraing	Resistant
Tuber blight	Quite susceptible
Foliage blight	Quite susceptible
Fusarium	Slightly susceptible
Common scab	Quite susceptible
Wart disease F1	Not susceptible / 10
Wart disease F2	- / -
Wart disease F6	- / -
Wart disease F18	- / -
PCN Ro1	- / -
PCN Ro2/3	- / -
PCN Pa2	Susceptible / 2
PCN Pa3	Susceptible / 2
Silver scurf	- / -
Early blight	Slightly susceptible
Leaf roll	Slightly susceptible
